RESULT 1 US-09-025-769B-38

Sequence 38, Patent No. 6

8, Application US/09025769B 6300064

GENERAL INFORMATION: APPLICANT: APPLICANT: APPLICANT:

Knappik, Achim Pack, Peter Ilag, Vic

APPLICANT: Ge, Liming
APPLICANT: Moroney, Simon
APPLICANT: Plueckthun, Andreas
TITLE OF INVENTION: Protein/(Poly)peptide libraries
NUMBER OF SEQUENCES: 373

c/o Fish & Neave

This invention relates to a novel humanised, chimeric or human monoclonal antibody or its antigen binding portion that specifically binds to insulin-like growth factor I receptor (IGF-IR). The antibodies of the invention can act as an inhibitor of binding of IGF-IR or IGF-II with IGF-IR and can inhibit in vivo tumour growth and IGF-IR tyrosine phosphorylation. The antibodies of the invention are useful for disgnosing the presence or location of an IGF-IR-expressing tumour in a subject. The antibody or its antisen-binding portion is also useful for neoplastic, anti-tumour, anti-analygen-binding portion is also useful for the antibodies may also be useful for increasing IGF-IR activity and thus restoring IGF-IR activity in a condition characterised by low IGF-IR levels e.g. neuropathy, or osteoporosis. An antibody of the patient, and to treat non-cancerous states or disease, e.g. acromegaly, grantism, psoriasis and atheroselerosis. Fully human anti-IGF-IR antibodies minimise the immunogenic and alleggic responses intrinsic to mouse or mouse-derivatised monoclonal antibodies and thus increase the efficacy and safety of the administered antibodies and thus increase the immediate in a patient, and to be administered antibodies and thus increase the efficacy and safety of the administered antibodies and thus increase the immediate in a patient sequence of the administered antibodies and thus increase the immediate.

Identifying and obtaining inhibitor of a pathological process for treating e.g. autoimmunity comprises determining if a compound is capable of modulating the binding of the Fc-epsilon-R1 receptor and an autoantibody against its alpha-chain -

Claim 20; Page 22; 29pp;

The present invention describes a method for identifying and obtaining an inhibitor of a pathological process. The method comprises determining if a compound is capable of modulating the binding of the Fc-epsilon-R1 receptor alpha-chain and an autoantibody against its alpha-chain. Also described: (1) use of the autoantibody against the Fc-epsilon-R1 receptor alpha-chain for identifying and obtaining an inhibitor of a pathological process; (2) use of the identified inhibitor for inhibiting activity of the autoantibody against the Fc-epsilon-R1 receptor alpha-chain; and activate the receptor; and (4) a polypeptide capable of specific binding to the Fc-epsilon-R1 receptor alpha-chain. The method is useful for obtaining an inhibitor of a pathological process e.g. imbalance between cell-bound and free IgE e.g. allergic disease (urticaria, late phase allergic reactions, intrinsic asthma, drug intolerance and food intolerance). IgE mediated disease or malignancy. The compound is useful cutoimmunity. The present sequence represents a human recombinant the present invention the present invention

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have

cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABPA 3990-ABPA 7728 represent the antibodies and fragments of the antibodies described in the method

artificial antibodies in silico which provides a structurally diverse and yet functionally more relevant source of antibody candidates which can then be screened for binding a wide variety of target molecules, including small molecules, and biomacromolecules such as proteins, peptides and nucleic acids. The libraries constructed are useful as source of antibody candidates for further screening for novel antibodies with high affinity against a wide range of antigens and having no or minimum immunogenecity to human subjects treated with antibody therapeutics. This sequence represents a protein region of an antibody relating to the novel antibody library construction method of the

                                                                                                                                                                                                                                                                                                                                                      ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for the construction of a library of recombinant antibodies. The novel method comprises clustering variable regions of a collection of antibodies having known 3D structures into at least two families of structural ensembles, each comprising at least two different antibody sequences but with substantially identical main chain conformations. The method is useful for constructing a library of

a cell expressing CCR2. They are useful for inhibiting or treating HIV infection. The proteins of the invention are useful for inhibiting c leukocyte trafficking, for treating CCR2-mediated disorders such as inflammatory disorder, autoimmuse disorders such as rheumatoid arthitis and multiple sclerosis, atherogenesis and atherosclerosis, and for inhibiting restenosis. They are useful in therapy or disposis, and in the manufacture of a medicament for treating CR2-2 mediated disease. They are also useful for treating allergy, anaphylaxis, malignancy, chronic and acute inflammation, histamine and ISB2. C mediated allergic reaction, shock, stenosis, allograft rejection, incurred in mummed deficiency syndrome (AIDS), restenosis, allograft rejection, incurred syndrome (AIDS), restenosis associated with vascular intervention, including angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting narrowing of the lumen of a vessel in a mammal, and inhibiting neointimal hyperplasia of a vessel in a mammal, and inhibiting neointimal hyperplasia of the present sequence is human heavy chain variable (VH) region, 038064.

Corvalan JR, Moyer JD, Cohen BD, Beebe J, Miller PE, WPI; 2002-575410/61 Novel humanized, chimeric monoclonal antibody that specifically binds to insulin-like growth factor I (IGF-1) receptor useful for inhibiting binding of IGF-I or IGF-II to receptor and for treating cancer in

WPI; 1997-179277/16

```
This invention relates to a novel humanised, chimeric or human monoclonal antibody or its antigen binding portion that specifically binds to insulin-like growth factor I receptor (IGF-IR). The antibodies of the invention can act as an inhibitor of binding of IGF-I or IGF-II with IGF-IR and can inhibit in vivo tumour growth and IGF-IR tyrosine phosphorylation. The antibodies of the invention are useful for diagnosing the presence or location of an IGF-IR-expressing tumour in a subject. The antibody or its antigen-binding portion is also useful for treating cancer in a human. The method for this further involves an antinoplastic, anti-tumour, anti-anglogenic or chemotherapeutic agent. The antibodies may also be useful for increasing IGF-IR activity and chuse restoring IGF-IR activity in a condition characterised by low IGF-IR levels e.g. neuropathy, or osteoporosis. An antibody of the invention is also useful for inducing apoptosis of specific cells in a invention is also useful for inducing apoptosis of specific cells in a patibodies minimise the immunogenic and allergic responses intrinsic to mouse or mouse-derivatised monoclonal antibodies and thus increase the efficacy and safety of the administered antibodies and thus increase the represents an anti-insulin-like growth factor I receptor antibody of the

These were derived from expressed sequence tags (BSTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a

```

This invention relates to a novel humanised, chimeric or human monoclonal antibody or its antigen binding portion that specifically binds to insulin-like growth factor I receptor (IGF-IR). The antibodies of the invention can act as an inhibitor of binding of IGF-I or IGF-II with IGF-IR and can inhibit in vivo tumour growth and IGF-IR tyrosine phosphorylation. The antibodies of the invention are useful for diagnosing the presence or location of an IGF-IR-expressing tumour in a subject. The antibody or its antigen-binding portion is also useful for treating cancer in a human. The method for this further involves an antinephotosis may also be useful for increasing IGF-IR activity and thus restoring IGF-IR activity in a condition characterised by low IGF-IR levels e.g. neuropathy, or osteoporosis. An antibody of the contribution is also useful for inducing apoptions, and the in a condition characterised by low the interpretation is also useful for inducing apoptions of specific cells in a condition and the interpretation is also useful for inducing apoptions. efficacy and safety of the administered antibodies. The present sequence represents an anti-insulin-like growth factor I receptor antibody of the patient, and to treat non-cancerous states or disease, e.g. acromegaly, gigantism, psortiasis and atheroseclerosis. Pully human anti-IFF-IR antibodies minimise the immunogenic and allergic responses intrinsic to mouse or mouse-derivatised monoclonal antibodies and thus increase the invention

470 AA; Sequence

This invention relates to a novel humanised, chimeric or human monoclonal antibody or its antigen binding portion that specifically binds to insulin-like growth factor I receptor (IGF-IR). The antibodies of the invention can act as an inhibitor of binding of IGF-I or IGF-II with IGF-IR and can inhibit in vivo tummour growth and IGF-IR tyrosine phosphorylation. The antibodies of the invention are useful for diagnosing the presence or location of an IGF-IR expressing tummour in a subject. The antibody or its antignambing portion is also useful for treating cancer in a human. The method for this further involves an antimaphastic, anti-tummour, anti-angiogenic or chemotherapeutic agent. The antibodies may also be useful for increasing IGF-IR activity and thus restoring IGF-IR activity in a condition characterised by low IGF-IR levels e.g. neuropathy, or osteoporosis. An antibody of the intention is also useful for inducing apoptosis of specific cells in a patient, and to treat non-cancerous states or disease, e.g. acromegaly, gigantism, psoriasis and atherosclerosis. Fully human anti-IGF-IR activitatised monoclonal antibodies and thus increase the mouse or mouse edrivatised monoclonal antibodies and thus increase the immunogents and altering responses intrinsic to mouse or mouse derivatised monoclonal antibodies and thus increase the immunosents an antibodies and thus increase the immunosents. The present sequence increase the immunosents and alteriated antibodies and thus increase the immunosents.

fregment, having binding specificity for CC-chemokine receptor 2
(CC2), comprising an antigen binding region of non-human origin. The and at least a portion of an immunoglobulin of human origin. The humanised antibodies are useful for inhibiting the interaction of a cell expressing CCR2. They are useful for inhibiting or treating CR2. They are useful for inhibiting or treating infection. The proteins of the invention are useful for inhibiting leukocyte trafficking, for treating CCR2-mediated disorders such as inflammatory disorder, autoimmune disorders such as rheumatoid arthritis and multiple salerosis, atherogenesis and atheroscelerosis, and for inhibiting restenosis. They are useful in therapy or disgnosis, and for inhibiting restenosis. They are useful in therapy or disgnosis, and for inhibiting restenosis. They are allowed a lact of a medicament for treating cCR2- mediated and in the manufacture of a medicament for treating allery, anaphylaxis, malignancy, chronic and acute inflammation, histamine and ISE- mediated allergic reaction, shock, stenosis, allograft rejection, fincluding angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting neointimal hyperplasia of a vessel in a mammal, preferably associated with vascular intervention.

The present sequence is human heavy chain variable (VH) region, 038062. The patent discloses a humanised antibody or its antigen-binding

The patent discloses a humanised antibody or its antigen-binding fragment, having binding specificity for CC-chemokine receptor 2 (CCR2), comprising an antigen binding region of non-human origin and at least a portion of an immunoglobulin of human origin. The humanised antibodies are useful for inhibiting the interaction of a cell expressing CCR2. They are useful for inhibiting or treating thy infection. The proteins of the invention are useful for inhibiting or treating cell that the season of a cell expressing CCR2-mediated disorders such as inflammatory disorder, autoimmune disorders such as rheumatoid arthritis and multiple sclerosis, atherogenesis and atherosclerosis, and for inhibiting restenosis. They are useful in therapy or diagnosis, and for inhibiting restenosis. They are useful in therapy or diagnosis, and in the manufacture of a medicament for treating CCR2-mediated diagnosis, and in the manufacture of a medicament for treating allery, anaphylaxis, and in the manufacture of a medicament for treating allery, anaphylaxis, fibrotic disease, asthma, inflammatory glomerulopathies, acquired inmune deficiency syndrome (AIDS), restenosis, allograft rejection, fibrotic disease, asthma, inflammatory glomerulopathies, acquired intervention, including angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting neointimal hyperplasia of a useful for inhibiting neointimal hyperplasia of the comment of a vessel in a mammal, and inhibiting neointimal hyperplasia of the comment of a vessel in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCAKAVVRGVISYYYYGMDVWGQGTT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a fragment of the human factor VIII antibody heavy chain variable region protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AIDS; inflammatory glomerulopathy; vascular intervention; 1D9 antibody; neointimal hyperplasia; VH; heavy chain variable region.

(I) is useful a primer or probe for detecting the
                                                                                   hybridizable polynucieotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has presented activity. (1) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a human factor VIII antibody A2 specific scFv protein DP-47 which is used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 ADSVKGRPTISRDNSKNTVYLEMNSLRAEDTAIYYCAKRGKGGYKYYGMDVWGQGTTVTV 120

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  15. Human FVIII antibody A2 BcFv heavy chain protein DP-47 #2. Human; heavy chain; antibody; factor VIII; hemostatic; hemophilia A; scFv; A2. Turenhout BAM (SANQ-) STICHTING SANQUIN BLOEDVOORZIENING AAY50973 standard; Protein; 122 AA Joorberg JJ, Van Den Brink EN, 98EP-0201543. 99WO-NL00285. (first entry) WO9958680-A2. 07-MAY-1999; 08-MAY-1998; Homo sapiens 23-MAR-2000 18-NOV-1999. AAY50973; AAY50973 

New polynucleotide, polypeptide and antibody useful for diagnosing the presence of neutralizing antibodies against factor VIII and for treatment of hemophilia A patients with these antibodies -

WPI; 2000-053102/04.
